

For information
on damaged lithium
polymer batteries,
contact EHS at 617-452-3471

MIT will accept **all types of batteries** for recycling, including alkaline batteries.* Batteries that must be recycled include: nickel cadmium, nickel metal hydride, lithium-containing batteries, and lead acid batteries.

*With the exception of 9 Volt. Alkaline batteries can be disposed of in regular trash. However, they contain materials that can be recycled and reused and should be recycled if possible.

TAPE THE TERMINALS

For 9 Volt, Lithium, and Button Batteries, battery terminals **must be taped** as a measure to prevent fires during collection and transportation.
