UPDATED TABLES 25,35,36,44 (Dec. 9, 2023)

About:

This document presents seawater property data from our library (web.mit.edu/seawater). Properties are listed as a function of temperature and salinity for the pressures, $P = P_0$, 7 MPa and 12 MPa. Here, $P_0 = 0.101325$ MPa for $t \leq 100^\circ\text{C}$ and for $t > 100^\circ\text{C}$ is the vapor pressure of seawater. For $P = 7$ MPa and 12 MPa, only the properties with pressure dependence are listed.

Request to users of this table:

While the seawater properties library routines are freely distributed, it is requested that users of this library please cite the following two journal articles which comprehensively present how correlations in the library were developed, the original data sources, the validity ranges, and the uncertainty in each property function.

Additionally, for each function, the original journal papers used to generate the functions are also mentioned. If they are different from the above two references, please cite them.

NB: The values in the table are dynamic viscosity $\times 10^3$ in units of kg/m-s. For example, a value of 1.791 corresponds to dynamic viscosity of 0.001791 kg/m-s.
